iDom KNX for iPad
IDOM Concept

Manage and monitor your KNX home automation system with your iPad.

You can access the following KNX home automation functions :
- Lights, dimmers
- Raising and lowering shutters, opening and closing blinds
- Heating set points and modes
- Mechanical ventilation and air conditioning
- KNX scenes
- Lighting scenarios
- Weather station levels : temperature, luminosity, anemometer, humidity, CO_2

You can operate the IP cameras.

Your iPad becomes a universal home automation remote control.
Define the size, colour and function of each button on your remote controls.
They can be linked together to control the whole building.

Consult the weather forecast for any city you choose.
Write reminder notes.

The application manages the home automation protocol via an IP/KNX gateway.
You can access your building locally or remotely :
- either with a WiFi connection (local or remote)
- or with a 3G connection (depending on the resources and options provided
  by your mobile telephone operator)

The application can access several sites in order to connect to different KNX home automation installations.

Download the application and documentation from our website
www.idomconcept.eu

An Internet connection is required to use all the application's features.
Activating the services enables the use of all the backup and restore functions
for the configuration databases on our servers.
This information is personal and secured through your iPad licence.

Thanks to this hosting, website constructors and service providers will be able
to assist and maintain the configuration of the home automation equipment.
This will guarantee the best possible use of the installation functions, while
removing any difficulties for the user.

The installers and system integrators can prepare or modify a setting
and send it to the user. This is an optional extra feature.

The terms for these services are detailed on our website
www.idomconcept.eu
